DETAILED ACTION

Claim Objections

Claims 5, 6, 11 and 16-18 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim should refer to other claims in the alternative only, and cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 2, 4, 7, 8, 10, 12, 13 and 15 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent 6,592,878 (Uni et al).

Uni et al discloses a method of treating a fertilized egg/increasing the body weight of a chick at hatch/increasing the hatchability of a fertilized egg of a bird comprising:

Uni et al discloses a method of injecting into an egg (note entire patent and specifically, col. 4, lines 60-36) after the start of incubation/on days 13 to 19 of incubation (as noted in col. 4, lines 53-55), a solution (note col. 4, lines 9-15) containing

Art Unit: 3644

amino acids (lysine) and a mixture (carbohydrates and lipids) of other components vital to the development of the growing embryo and relatively the same as the amino acids within the embryo (since it is known that lysine is a known amino acid of chickens, which determine the nutritive value of proteins in the fertilized egg.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 3, 9 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent 6,592,878 (Uni et al).

While Uni et al teach that the injection of the nutrient solution may be done at preferably the fourth quarter of the incubation period (as noted in col. 4, lines 50-52) the reference fails to teach conducting the step on an egg on days 13-14 of the incubation process.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to have administered the nutrient solution in the method as taught by Uni et al, in the third quarter/on days 13-14, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233.
